# **Press Conference, Charles University, Innovation in Education**

---

At a press conference on the premisses of the Faculty of Education, on June 2, 2015, Charles University presented the results of mutual cooperation with a successful Czech start-up, Corinth company, the result of which is an internationally valued educational application in the area of natural sciences for pupils and students of basic and secondary schools, Corinth Classroom. By such cooperation the university started to fulfill its most natural form of transferring knowledge, which is development and implementing innovation in the area of education.

Corinth Classroom is an interactive 3D aid for schools. Via such aid teachers and pupils are able to observe in details and touch in real parts of the human body in 3D, as well as the structure of plants, geometrical structures, or atoms and molecules. Interactive models can then be used by pupils and students in their own presentations or printed on a 3D printer. Charles University through its Centre of Transfer of Knowledge and Technologies tries to intensify the presentation of the scientific knowledge and the capacity of its scientific staff in practical life.
