

Field of study is designed as a profession-oriented teacher training that qualifies graduates for the job of practical training teacher and vocational training. The core of study are educational and psychological subjects, complemented by courses in applied biology, environmental sciences and healthy lifestyle. Aim of the study is to prepare graduates to work as teachers especially in the pedagogical-psychological field and to cultivate their communication and social skills as well as to motivate them for lifelong learning in the field. Particular attention is paid to modern didactic and information technologies and their use in teaching. All courses emphasise close links between lecturing and teaching practice as well as on professional ethics of teachers as reflective practitioners.
